PROBLEM STATEMENT

Team ID	N/A - Individual Project
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

Problem Statements

The following problem statements identify key challenges faced by employees, managers, and IT staff during the laptop request process. Each statement is organized into the problem, the user's goal, the barrier, its underlying reason, and the resulting impact.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee who needs a laptop for work.	Submit a request with the correct laptop type, configuration, and business justification.	The request may be incomplete or submitted through inconsistent channels.	There may not be one structured request form that collects all required details.	Frustrated by extra effort, clarification requests, and delays in getting the request started.
PS-2	An employee and their approving manager.	Submit, review, and approve a laptop request promptly.	Approval can require manual follow-ups and may remain pending without clear visibility.	Approval routing and decision tracking may not be handled through one automated process.	Uncertain about the approval status and concerned about delays.
PS-3	An IT team member responsible for fulfilling approved laptop requests.	Receive clear tasks and act on approved requests efficiently.	Task handoffs and communication with requesters or approvers may be delayed or missed.	Task assignment and stakeholder notifications may depend on manual coordination.	Concerned about extra administrative work and unclear fulfillment responsibilities.
PS-4	An employee, manager, or administrator tracking a laptop request.	Check request progress and understand when fulfillment is complete.	The current status and request history may not be easy to access in one place.	Request records, status updates, and reporting may not be centralized or consistently updated.	Inconvenienced by repeated enquiries and a lack of transparency around asset allocation.

Overall Problem Statement
Employees need a consistent way to request laptops and track their progress, while managers and IT staff need a reliable process to approve, assign, and fulfill those requests. Manual communication and disconnected updates can create delays, increase administrative effort, and reduce visibility. A ServiceNow Service Catalog item supported by automated approvals, IT task assignments, email notifications, request tracking, and reporting is proposed to address these challenges.
